

COMPRESSION WASHER WIRELESS LOAD CELL

**INSTALL ON THE HOOK YOKE AND MAINTAIN MAXIMUM HOOK
HEIGHT IN YOUR NEXT APPLICATION**

LSI offers Compression Washer Load Cells that will typically install on the hook yoke, allowing users to maintain maximum hook height.

We will always work with you on an application analysis to determine a “best fit” solution.

At LSI, we build custom compression washer load cells to suit a wide variety of applications. If your application dictates that maintaining maximum hook height is critical, then we can provide you with a compression washer load cell/wireless transmitter solution to suit your needs.

The principal behind the compression washer starts with a simple install above the hook trunion, which sits above the hook and below the nut. As the load is lifted, the compression washer compresses, providing a load weight.
